

NOTUS ENERGY

CONSTRUCTION SERVICES FOR WIND POWER PROJECTS

Almost **520**
foundations
built

POWER ON YOUR SIDE.

NOTUS ENERGY

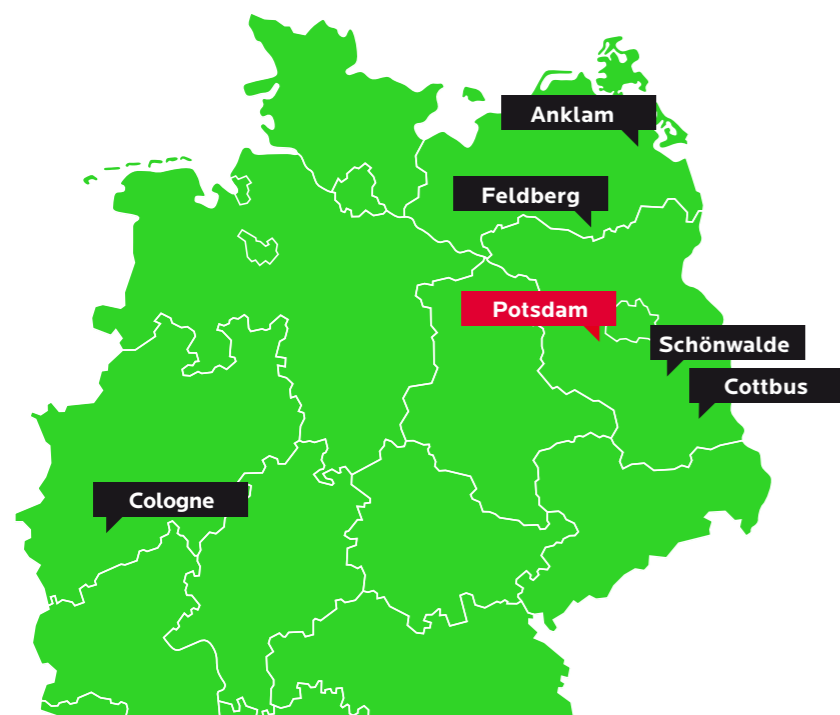

Strong partner for almost 20 years

Since its founding in 2001, NOTUS energy has been initiating, planning, implementing and operating wind power projects. At the same time, the focus is on the development of its own projects – starting with location acquisition up to turnkey wind turbine farms. Furthermore, NOTUS energy frequently executes services for contractors and as a result, has successfully completed numerous external projects in the past.

Thanks to its success, the company is growing steadily. Its headquarters, a second branch in Potsdam and many other offices in Germany and abroad represent NOTUS energy accordingly.

Since 2007 NOTUS energy has also been active on an international scale and has carried out various projects in Europe and in North and South America. However, the focus of the company's activities still lies in the regions of Brandenburg, Mecklenburg-West Pomerania and North Rhine-Westphalia.

OUR SITES

GENERAL CONTRACTOR

Worldwide turnkey construction work

Upon request, NOTUS energy covers the entire portfolio of a general contractor and provides the turnkey construction of wind farms and their infrastructure worldwide.

The following services are included:

- assumption of all services for the turnkey erection of wind power projects
- flexible and fast execution
- commissioning and subcontracting
- ensuring high quality, competitive prices and dependable supply reliability of wind power plants through a close-knit NOTUS energy network
- coordination of all construction works.

NOTUS energy realizes international projects in line with an EPC business transaction (Engineering, Procurement, Construction). For customers, this means: The timely supply of turnkey plants at stipulated fixed prices are guaranteed.

Within the process, NOTUS energy uses standardized FIDIC prototype building contracts (Fédération Internationale des Ingénieurs Conseils). For good reasons: These are recommended by the World Bank or the EU when financing and are in part mandatory.

CONSTRUCTION MANAGEMENT

Always an eye on the goal

NOTUS energy always goes the whole nine yards regarding construction management for wind farm projects. The complete construction supervision and management as well as the coordination of all trades is in the hands of NOTUS energy. Either from the start of a project or later during any phase of performance. Complete or selected sections of construction projects will be swiftly executed.

AN OVERVIEW OF OUR SERVICES

Construction planning and preparation of building works

- optimization of construction costs starting during planning phase and trough out
- minimization of the required internal farm space for the delivery of wind power plants
- detailed construction schedule planning.

Tendering and contracting

- tendering for road building, construction of foundations and underground cable engineering, as well as for transformer and transmission stations
- tender selection and negotiations up to contracting
- contract management for all building agreements
- management of special experts such as structural engineers, field surveyors and subsoil expert surveyors
- coordination and support in system certification in accordance with grid operators, certifiers and manufacturers.

Constructional supervision and technical construction site management

- constructional supervision and coordination of all construction trades
- supervision of mitigation measures, fire protection as well as compensating measures
- quality management
- approval of construction works including all technically involved professions in planning and project supervision
- coordination of commissioning processes with the network operators
- compiling of construction documents.
